EXECUTIVE BRIEFING

All 9 identified issues could affect how easily users can capture the selected teardown scope and identify evidence-backed product opportunities

01 · PLAN NEXT
01 Homepage CTA choices make the first action unclear
high impact · medium effort

02 · PLAN NEXT
02 Some controls are unclear to people and automated agents
high impact · medium effort

03 · PLAN NEXT
03 Some controls are invisible to automated agents
high impact · medium effort

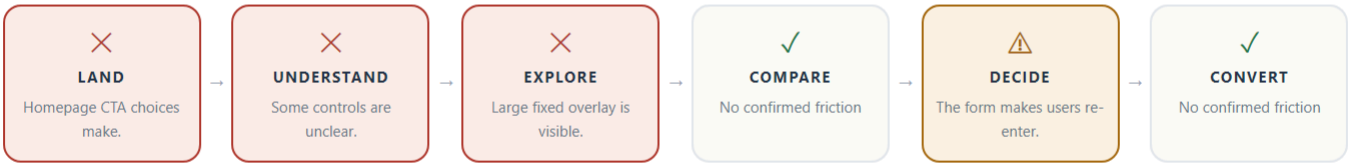

04 · PLAN NEXT
04 Custom interactive control has no exposed semantic role
high impact · medium effort

INVESTIGATION SNAPSHOT

75	19	9	5
SCREENS REVIEWED	JOURNEY STEPS	ACCEPTED FINDINGS	HIGH PRIORITY

All 9 recommendations are backed by directly captured or measured evidence.

Friction concentrates in Land and Understand stages of the journey

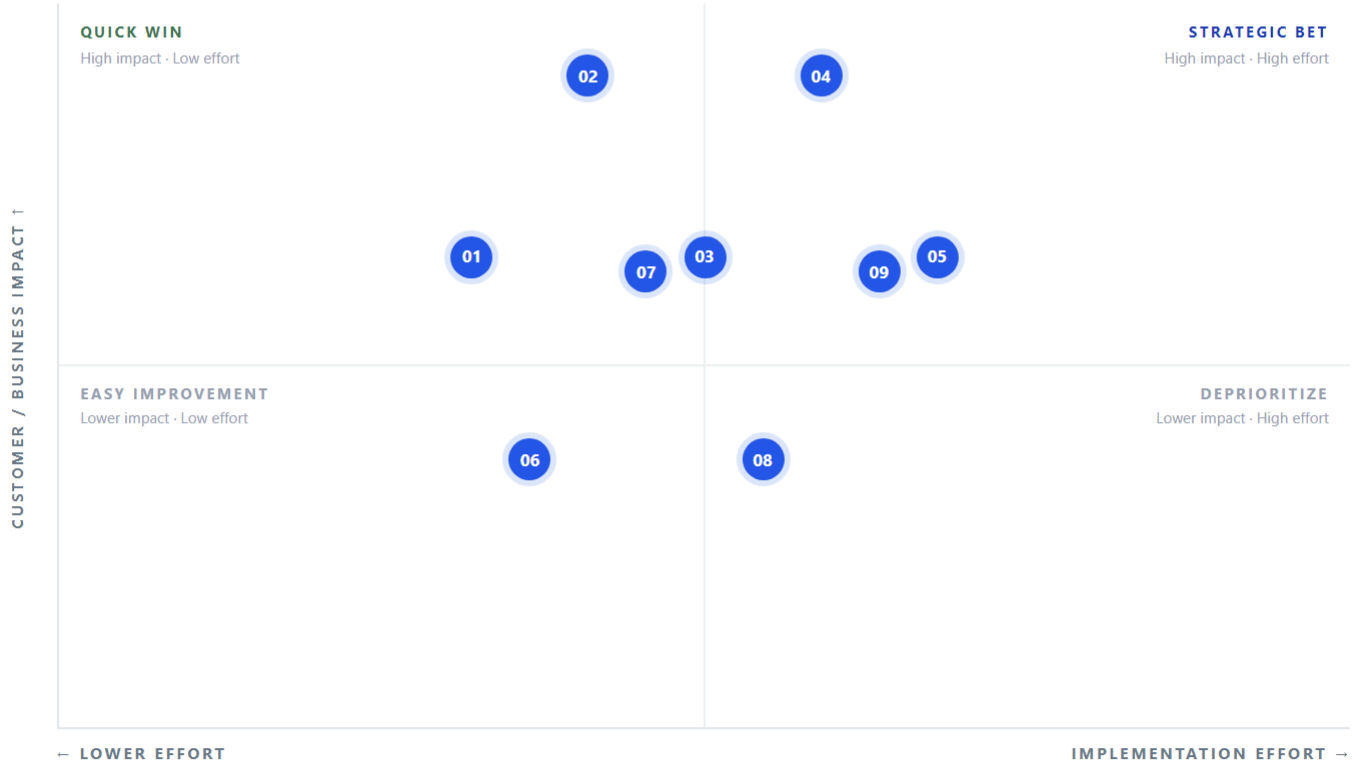

SEVERITY MIX

5	4	9
HIGH SEVERITY	MEDIUM / LOW	DIRECTLY EVIDENCED
56% of confirmed findings are high severity.	Remaining findings are scheduled improvements rather than blockers.	all 9 recommendations are backed by directly captured or measured evidence.

PRIORITIES AT A GLANCE

Every high-impact improvement requires planning effort - sequence them deliberately

#	FINDING	EVIDENCE	IMPACT	EFFORT	ACTION
01	Homepage CTA choices make the first action unclear	Screenshot	HIGH	MEDIUM	Plan
02	Some controls are unclear to people and automated agents	Screenshot	HIGH	MEDIUM	Plan
03	Some controls are invisible to automated agents	Screenshot	HIGH	MEDIUM	Plan
04	Custom interactive control has no exposed semantic role	Screenshot	HIGH	MEDIUM	Plan
05	Large fixed overlay is visible without an accessible modal state	Screenshot	HIGH	MEDIUM	Plan

07	Responsive: customersupport@inkasure.com is only 203×17px (3 pages)	Screenshot	MEDIUM	MEDIUM	Plan
08	The form makes users re-enter information unnecessarily	Screenshot	MEDIUM	MEDIUM	Plan
09	Trust pattern present (2 pages)	Screenshot	MEDIUM	MEDIUM	Plan

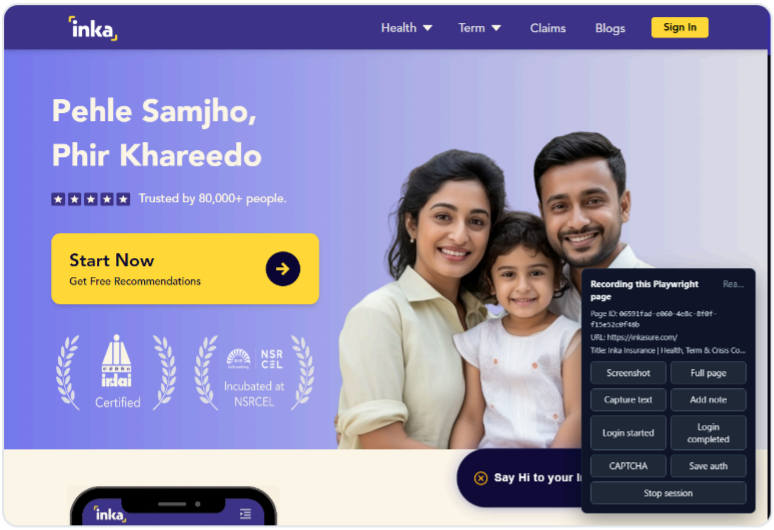

Finding 01 should be addressed first because it combines high estimated impact with the moderate implementation effort.

FINDING 01

Homepage CTA choices make the first action unclear

HIGH PLAN NEXT

Impact: high · Effort: medium

EVIDENCE 01 · - Button has no accessible name (icon-only control?) - Button has no accessible name (icon-only control?) - Button has.

1 Highlighted region: The crawled homepage exposes multiple CTA labels (Start Your Claim Journey, Contact Us, Contact Us).

WHAT HAPPENED

The crawled homepage exposes multiple CTA labels (Start Your Claim Journey, Contact Us, Contact Us); the captured page should make the intended first action visually explicit.

WHY IT MATTERS

Materially affects cta during real journeys. Detected via 1 deterministic check (EXEC-CTA-COMPETING-PRIMARY) on 2 page states.

HOW TO FIX

Make the intended next action clear at the affected journey step, then confirm it in the same captured flow.

EXPECTED RESULT

reduced decision ambiguity at the entry point.

HOW TO VERIFY

Re-run the homepage journey and confirm one primary action dominates visually.

WHAT GOOD COULD LOOK LIKE

[Primary CTA - one dominant action]

Secondary action - quiet styling

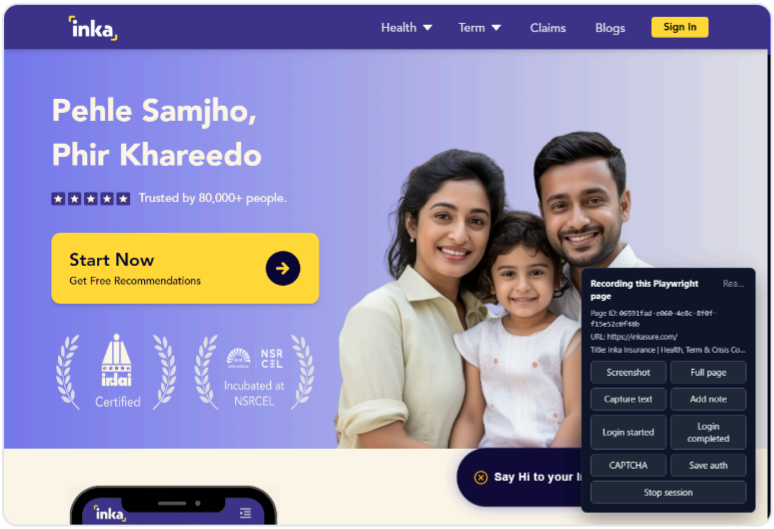

Learn more - text link

FINDING 02

Some controls are unclear to people and automated agents

HIGH PLAN NEXT

Impact: high · Effort: medium

EVIDENCE 02 · - Link has no accessible name (icon-only control?) - Link has no accessible name (icon-only control?) - Link has no.

1. Highlighted region: An important clickable control does not explain what it does to screen readers or automated agents.

WHAT HAPPENED

An important clickable control does not explain what it does to screen readers or automated agents.

WHY IT MATTERS

People using assistive technology - and AI agents trying to navigate the product - may not know what action the control performs.

HOW TO FIX

Give each icon-only or unlabeled control a clear accessible label that describes its action.

EXPECTED RESULT

people and automated agents can identify and use the control reliably.

HOW TO VERIFY

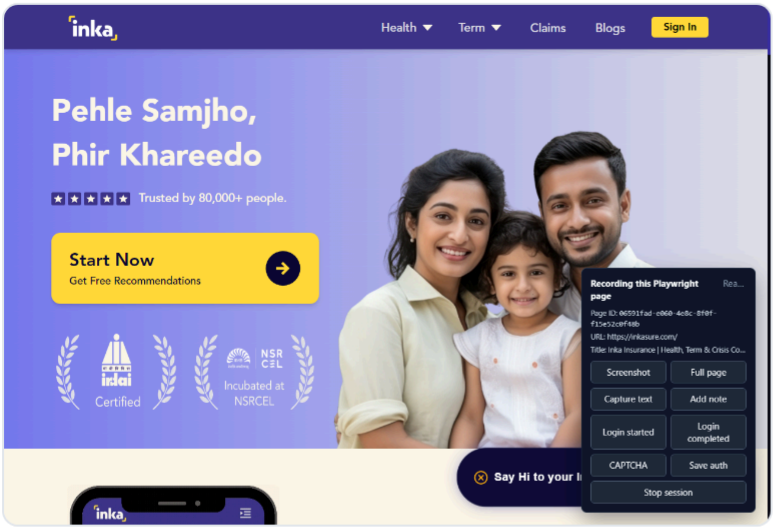

Re-run the Human + Agent Experience checks and confirm the control has a clear name.

FINDING 03

Some controls are invisible to automated agents

HIGH PLAN NEXT

Impact: high · Effort: medium

EVIDENCE 03 · Interactive link has no accessible name.

1 Highlighted region: An important clickable control does not explain what it does to screen readers or automated agents.

WHAT HAPPENED

An important clickable control does not explain what it does to screen readers or automated agents.

WHY IT MATTERS

People using assistive technology - and AI agents trying to navigate the product - may not know what action the control performs.

HOW TO FIX

Give each icon-only or unlabeled control a clear accessible label that describes its action.

EXPECTED RESULT

people and automated agents can identify and use the control reliably.

HOW TO VERIFY

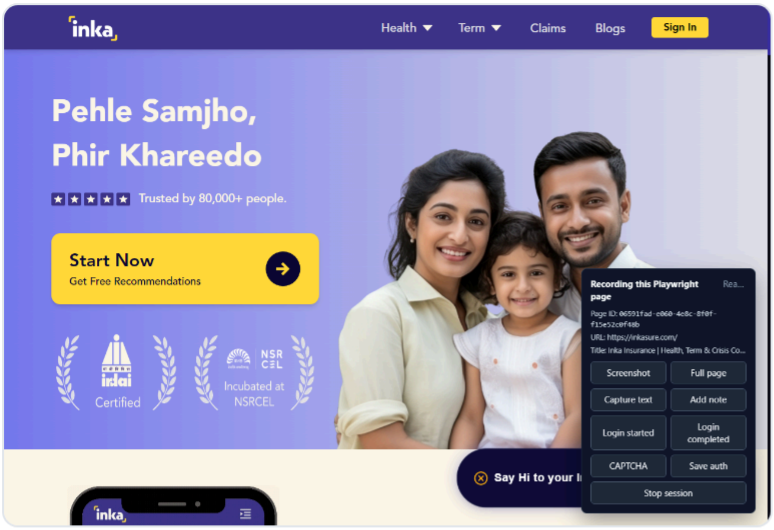

Re-run the Human + Agent Experience checks and confirm the control has a clear name.

FINDING 04

Custom interactive control has no exposed semantic role

HIGH PLAN NEXT

Impact: high · Effort: medium

EVIDENCE 04 · Custom interactive control has no exposed semantic role.

1 Highlighted region: Custom interactive control has no exposed semantic role.

WHAT HAPPENED

Custom interactive control has no exposed semantic role.

WHY IT MATTERS

An autonomous agent cannot reliably identify, operate, or verify this interface state from the captured evidence.

HOW TO FIX

Expose a unique accessible name and a native or correctly-role-mapped control, then re-run the same journey.

EXPECTED RESULT

reduced decision ambiguity at the entry point.

HOW TO VERIFY

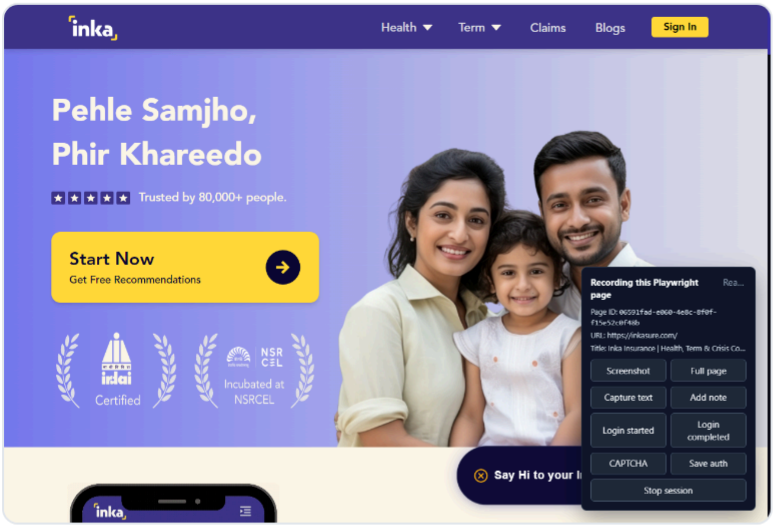

Re-run the Human + Agent Experience checks and confirm the control has a clear name.

FINDING 05

Large fixed overlay is visible without an accessible modal state

HIGH PLAN NEXT

Impact: high · Effort: medium

EVIDENCE 05 · Large fixed overlay is visible without an accessible modal state.

WHAT HAPPENED

Large fixed overlay is visible without an accessible modal state.

WHY IT MATTERS

An autonomous agent cannot reliably identify, operate, or verify this interface state from the captured evidence.

HOW TO FIX

Expose a unique accessible name and a native or correctly-role-mapped control, then re-run the same journey.

EXPECTED RESULT

faster path completion through clearer structure.

HOW TO VERIFY

Re-run the Human + Agent Experience checks and confirm the control has a clear name.

WHAT GOOD COULD LOOK LIKE

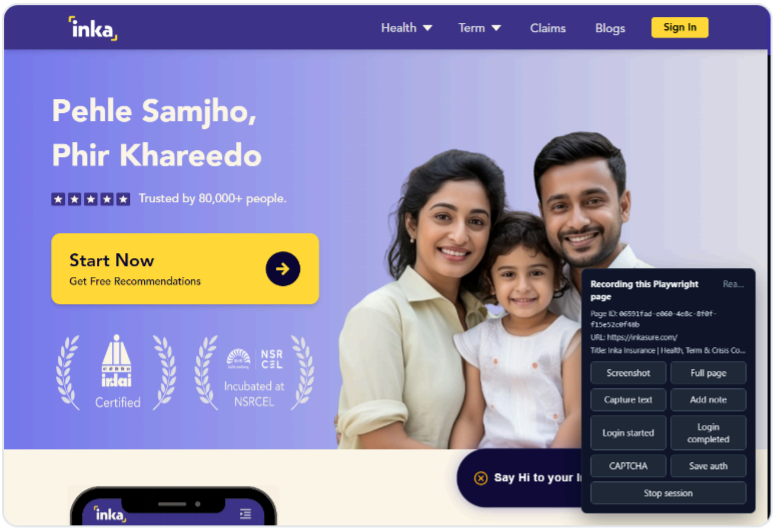

- NAV with explicit section labels
- Subpage breadcrumbs
- [Persistent primary actions]

FINDING 06

Some text is too faint to read comfortably

MEDIUM PLAN NEXT

Impact: medium · Effort: medium

EVIDENCE 06 · - "" has 1.23:1 contrast - "Claims" has 1.23:1 contrast - "Blogs" has 1.23:1 contrast - "HDFC Ergo" has 2.08:1.

1 Highlighted region: Important text has too little contrast against its background.

WHAT HAPPENED

Important text has too little contrast against its background.

WHY IT MATTERS

Users may struggle to notice or read important information, especially on lower-quality screens or in bright environments.

HOW TO FIX

Increase the difference between the foreground and background colors for the affected text.

EXPECTED RESULT

lower friction in the affected step.

HOW TO VERIFY

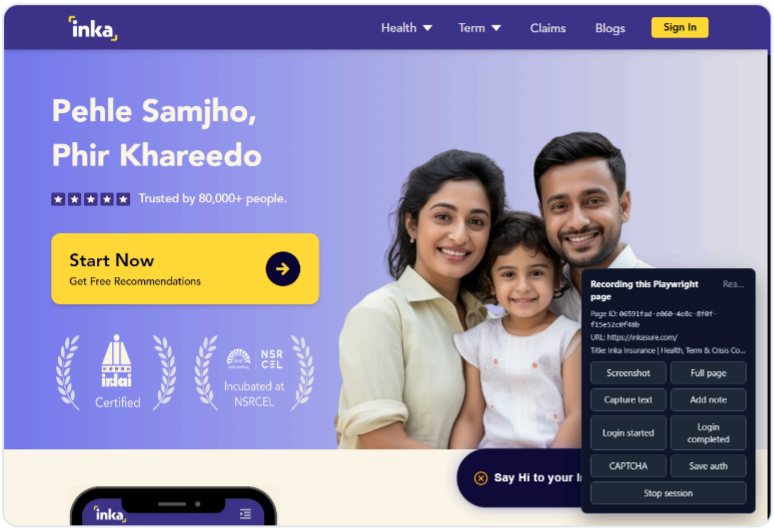

Re-run the captured journey and compare screenshots before and after the change.

FINDING 07

Responsive: customersupport@inkasure.com is only 203×17px (3 pages)

MEDIUM PLAN NEXT

Impact: medium · Effort: medium

EVIDENCE 07 · - "customersupport@inkasure.com" is only 203×17px - "9216652807" is only 78×17px - "" is only 18×18px - "Facebook".

1 Highlighted region: - "customersupport@inkasure.com" is only 203×17px - "9216652807" is only 78×17px - "" is only 18×18px.

WHAT HAPPENED

- "customersupport@inkasure.com" is only 203×17px - "9216652807" is only 78×17px - "" is only 18×18px - "Facebook" is only 19×18px - "Instagram" is only 13×14px - "YouTube" is only 18×18px - "customersupport@inkasure.com" is only 203×17px - "9216652807" is only 78×17px - "" is only 18×18px.

WHY IT MATTERS

Adds friction without clearly breaking the journey (EXEC-A11Y-TARGET-SIZE).

HOW TO FIX

Make the intended next action clear at the affected journey step, then confirm it in the same captured flow.

EXPECTED RESULT

lower friction in the affected step.

HOW TO VERIFY

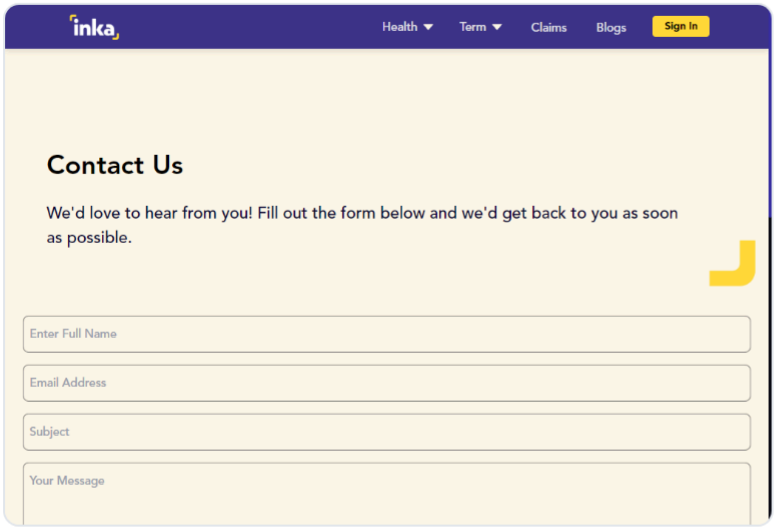

Re-run the homepage journey and confirm one primary action dominates visually.

FINDING 08

The form makes users re-enter information unnecessarily

MEDIUM PLAN NEXT

Impact: medium · Effort: medium

EVIDENCE 08 · - Email input lacks autocomplete attribute on a conversion surface - Email input lacks autocomplete attribute.

WHAT HAPPENED

The field does not tell the browser what kind of information it collects.

WHY IT MATTERS

Browsers and password managers cannot reliably help people complete the form.

HOW TO FIX

Add the appropriate autocomplete hint for the field type.

EXPECTED RESULT

lower friction in the affected step.

HOW TO VERIFY

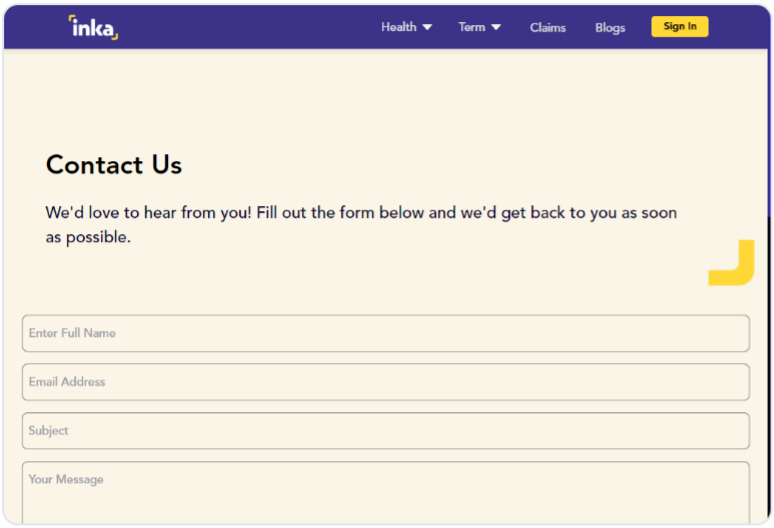

Re-run the captured journey and compare screenshots before and after the change.

FINDING 09

Trust pattern present (2 pages)

MEDIUM PLAN NEXT

Impact: medium · Effort: medium

EVIDENCE 09 · - Footer exposes privacy/terms/contact trust surface - Footer exposes privacy/terms/contact trust surface - Footer.

WHAT HAPPENED

- Footer exposes privacy/terms/contact trust surface - Footer exposes privacy/terms/contact trust surface - Footer exposes privacy/terms/contact trust surface - Footer exposes privacy/terms/contact trust surface - Footer exposes privacy/terms/contact trust surface - Footer exposes.

WHY IT MATTERS

Consistent with established usability conventions; recorded as context, not a problem.

HOW TO FIX

Preserve this effective product pattern.

EXPECTED RESULT

stronger decision-point confidence.

HOW TO VERIFY

Re-capture the decision-point screen and confirm supporting proof is present.

WHAT GOOD COULD LOOK LIKE

[Primary form]

✓ 4.8 rating ✓ 12,000+ members ✓ Money-back guarantee

30-DAY ROADMAP

A four-week sequence that front-loads the highest-leverage changes

Recommended sequence: **01** → **02** → **03**. Full recommendations appear on the finding pages; this plan only sequences the work.

Do now
0-7 DAYS

Plan next
2-4 WEEKS

01

Make the intended next action clear at the affected journey step, then confirm it in the same captured flow.

Owner: Product/design · Effort: medium · Validate: Re-run homepage journey; confirm one dominant CTA

02

Give each icon-only or unlabeled control a clear accessible label that describes its action.

Owner: Product/design · Effort: medium · Validate: Re-run homepage journey; confirm one dominant CTA

03

Give each icon-only or unlabeled control a clear accessible label that describes its action.

Owner: Product/design · Effort: medium · Validate: Re-run homepage journey; confirm one dominant CTA

04

Expose a unique accessible name and a native or correctly-role-mapped control, then re-run the same journey.

Owner: Product/design · Effort: medium · Validate: Re-run the captured journey and compare screenshots

05

Expose a unique accessible name and a native or correctly-role-mapped control, then re-run the same journey.

Owner: Product/design · Effort: medium · Validate: Re-run the captured journey and compare screenshots

06

Increase the difference between the foreground and background colors for the affected text.

Owner: Product/design · Effort: medium · Validate: Re-run the captured journey and compare screenshots

Validate
AFTER EACH CHANGE

- Re-run the relevant captured journeys
- Compare before / after screenshots
- Confirm navigation states resolve
- Record outcomes against each finding ID

RECOMMENDED NEXT MOVE

THIS WEEK

Review the priority stack with the product team.

NEXT SPRINT

Scope findings 01 and 02 and 03 and 04 and 05 and 06 and 07 and 08.

AFTER IMPLEMENTATION

Re-run the captured journeys and compare evidence side by side.
